👤 PROFILE

Software Engineer with 4+ years of commercial experience in full-stack development (MERN stack). Specialized in building scalable backend systems, REST APIs, and data-driven applications. Holds Bachelor's and Master's degrees in Automation and Computer-Integrated Technologies and is currently pursuing a PhD in the same field. Has hands-on experience with embedded systems, IoT development, and hardware-software integration (Arduino, ESP32, sensors, control systems, C# desktop applications). Also experienced in rapid prototyping of hardware solutions, including basic CAD modeling (Fusion 360) and 3D printing for embedded and IoT systems. Combines strong software engineering skills with an understanding of automation and control systems.

🧰 WORK EXPERIENCE

Full-stack js developer, A-Development

01/2021 – Present
Kharkiv

- Developed and maintained full-stack web applications using React.js, Node.js, Next.js and TypeScript
- Designed and implemented RESTful APIs for business logic and data processing
- Built scalable backend services and integrated third-party APIs
- Worked with MongoDB and PostgreSQL for data modeling and querying
- Participated in system design, debugging, and performance optimization
- Improved application performance and reliability in production environments
- Collaborated in a team using Git, Jira, and modern development workflows

EMBEDDED / IOT / AUTOMATION EXPERIENCE, Academic & Personal Engineering Projects

- Developed embedded systems using Arduino (C/C++) for sensor-based data acquisition and control
- Built IoT solutions using ESP32 with real-time communication to Node.js backend
- Integrated sensors (temperature, motion, etc.) into automation systems
- Implemented relay-based control systems for device automation
- Developed a C# desktop application to control servo motors via USB interface
- Implemented hardware-software interaction for actuator control
- Worked with drone-related control and telemetry systems
- Designed, assembled, and soldered electronic circuits and prototypes
- Worked with electrical schematics and basic automation system design
- Designed and printed simple mechanical parts using 3D printing (PLA) for prototyping embedded/IoT systems
- Basic experience with CAD modeling in Fusion 360 for custom components

🎓 PRIMARY EDUCATION

PhD (3rd year) — Automation and Computer-Integrated Technologies,
National Aerospace University named after ME Zhukovsky 'KHAI'

09/2023 – Present
Kharkiv, Ukraine

Master of Automation and Computer-Integrated Technologies,
National Aerospace University named after ME Zhukovsky 'KHAI'

09/2020 – 12/2021
Kharkiv

Bachelor of Automation and Computer-Integrated technologies,
National Aerospace University named after ME Zhukovsky 'KHAI'

09/2016 – 06/2020
Kharkiv

{ } LANGUAGES/Frameworks/Tools

Javascript | Typescript | HTML | CSS/SCSS | GIT | MongoDB | React.js | Node.js | Next.js | Jira | AWS | Mailgun | Klaviyo | C# | C++ | Heroku | Nest.js | Dart | Flutter | Fusion 360

SOFT SKILLS

- Communication
- Good Attitude
- Self Motivated
- Dependability
- Collaboration/Teamwork
- Organization
- Honesty
- Critical Thinking
- Active Learning
- Physically Fit
- Decision Making

ADDITIONAL EDUCATION

Front-End Pro course, Hillel IT-school

<https://certificate.ithillel.ua/view/98275008/en> 

02/2020 – 05/2020

Kharkiv, Ukraine

Front-End Basic course, Hillel IT-school

<https://certificate.ithillel.ua/view/44508191/en> 

10/2019 – 12/2019

Kharkiv, Ukraine

LANGUAGES

English — (A2/B1) Basic working proficiency, reading technical docs, limited spoken communication

Ukrainian — Native

Russian — Fluent
